

# Investment Discovery System

## Tool Performance Dashboard

**Tuesday, April 14, 2026**

*Performance since inception — Sessions S1 through S54*

Prepared for: Pedro

Pipeline v1.1 (directional convergence) · FDA Pipeline v2.0 · 5 active scanners + convergence engine

## Executive Summary

Across 54 sessions since inception (~45 operational and 9 maintenance), the system has emitted approximately **1,784** raw signals across five scanners plus the convergence engine. Only 6 convergences have been detected to date; 0 have been actionable — the rest were boilerplate or sub-floor false positives now filtered by D-043 (form whitelist) and the \$215M mcap floor. The pipeline has produced 1 delivered candidate (**TVTX — APPROVED 2026-04-13**), 3 other names currently or recently active (AXSM, VERA, pre-demotion VRDN), and 4 names on the watchlist. Compile-cleanliness of the 14-tool codebase has been **100%** for the last 15+ sessions (no truncation regressions post-S46). The dominant persistent degradation is AMF France (404 since S49); all other external endpoints have been  $\geq 98\%$  reachable across recorded probes.

| Sessions | Total Signals | Convergences     | Active / Delivered | Compile Clean          |
|----------|---------------|------------------|--------------------|------------------------|
| 54       | 1,784         | 6 (0 actionable) | 3 / 1              | 14 / 14 (15+ sessions) |

### Headlines since last report

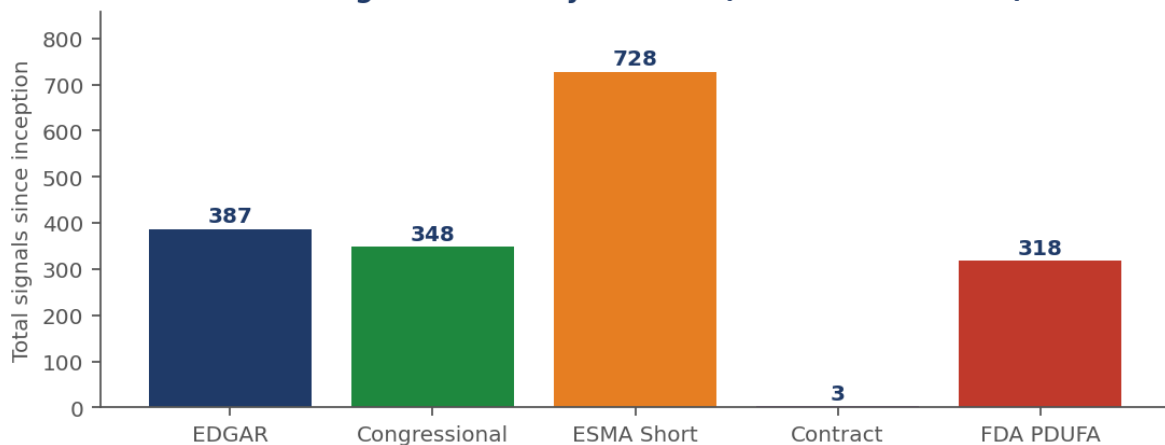

- TVTX FILSPARI sNDA for FSGS — **APPROVED 2026-04-13** (narrow label: 'FSGS without nephrotic syndrome', with Boxed Warning and REMS). Candidate moved to candidates/delivered/.
- AXSM enters T-14 intensive window ~2026-04-16 (PDUFA 2026-04-30). 22 consecutive clean kill sweeps.
- FBLG convergence false positive has now recurred 5 consecutive sessions (S50–S54) — recommended for suppression list per S54.
- AMF France 404 confirmed unrecoverable (S54 probed 6 alternate endpoints; dataset appears delisted from data.gouv).

## Per-Tool Performance Since Inception

Each tool is evaluated on three axes: operational health (compile + API reachability), signal production (total emitted + per-session pace), and outcome yield (how many signals survived filters and contributed to candidates).

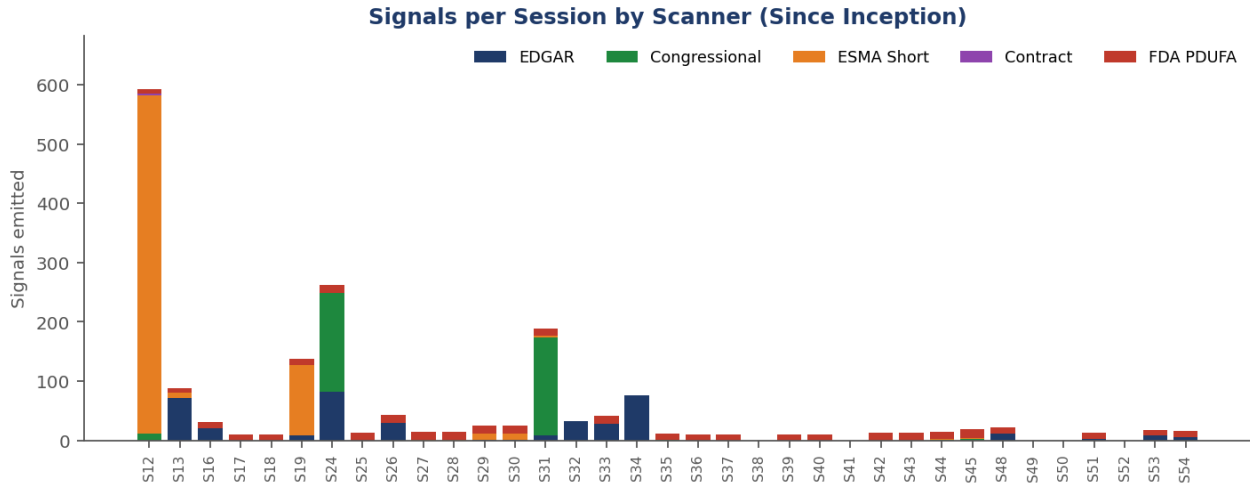

| Tool                     | Status      | Sessions | Total | Avg/Session | Contributed To                              | Notes                                                                                                             |
|--------------------------|-------------|----------|-------|-------------|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| edgar_filing_monitor.py  | OPERATIONAL | 30       | 387   | 12.9        | 1 (VRDN via cross-ref)                      | 4-category rotation. D-043 cut boilerplate ~70%. EFTS intermittent 500 on keywords; filing-type scans unaffected. |
| congressional_trading.py | OPERATIONAL | 25       | 348   | 13.9        | 1 (AMT convergence, rejected)               | Capitol Trades (STOCK Act). Early 165+ strength-2 noise suppressed by D-029. 260-290 trades scanned/session.      |
| esma_short_scanner.py    | DEGRADED    | 27       | 728   | 27.0        | 1 (HROW via BaFin, watchlist)               | 4 regulators (FCA/AFM/BaFin/AMF). ~2,200 positions/session; 175 crowded. AMF 404 since S49. D-035 basket filter.  |
| contract_monitor.py      | OPERATIONAL | 26       | 3     | 0.1         | 0 (Shionogi \$119M recurring non-tradeable) | USAspending POST-only. Steady 0 actionable — most high-value awards land at private/government primes.            |
| fda_pdufa_pipeline.py    | OPERATIONAL | 28       | 318   | 11.4        | 3 (TVTX, AXSM, VERA) + watchlist            | v2.0 auto-discovery + approval cross-check (D-046). 42-entry watchlist. Steady 10-15 signals/session.             |
| convergence_engine.py    | OPERATIONAL | —        | 6     | 0.13        | 0 actionable (all FP to date)               | Directional v1.1. AMT (S30-S31) noise; FBLG (S50-S54) sub-floor recurring. S54 suppression recommended.           |

**Total Signal Volume by Scanner (Recorded Sessions)**

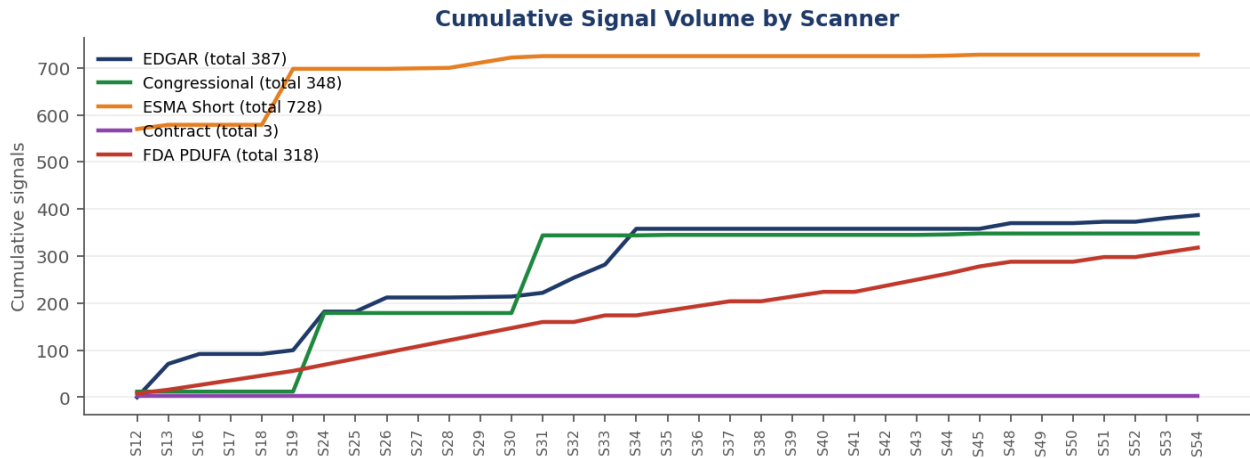

# Signal Production Over Time

Per-session signals stacked by scanner for every session with explicit counts in PROGRESS\_LOG.md. Early-system noise (S19 ESMA-cached, S24 Congressional 167, S31 Congressional 165) was driven by missing filters that D-029/D-031/D-035 have since addressed — the cleaner pattern from ~S35 onward (~10-20 signals/session, mostly FDA watchlist) is intentional signal quality gain.

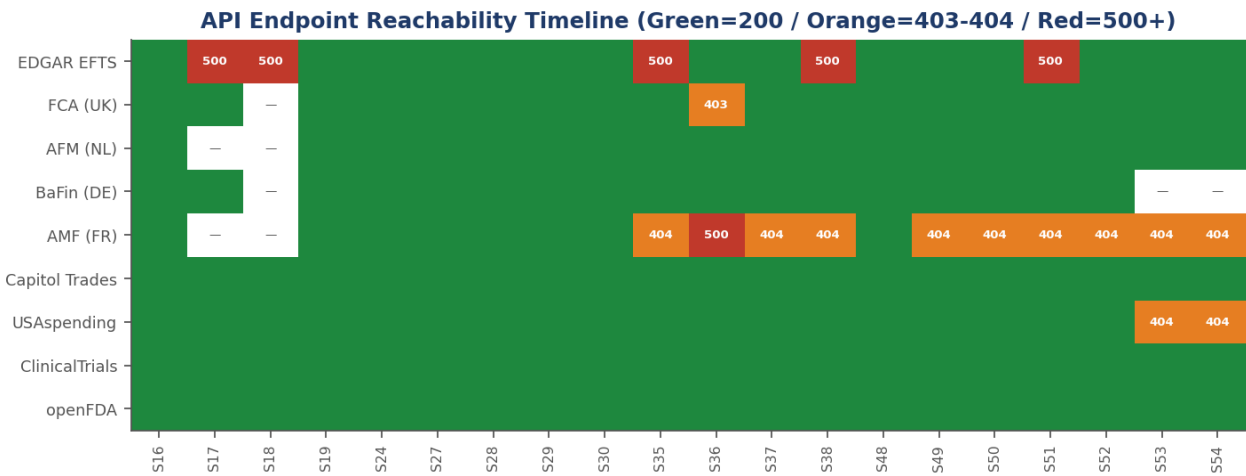

## Cumulative volume by scanner

FDA PDUFA is the production workhorse (stable 10-15 signals/session from the 42-entry watchlist). EDGAR spikes with rotation category (governance and distress produce more raw hits than activist or M&A;). Congressional volume has collapsed (intentional) post-D-029. ESMA is regulator-cadence dependent.

## API Endpoint Reachability

Recorded HTTP status probes per session. Green = 200 OK; orange = 403/404 (blocked or missing); red = 500+ (server error). Blanks = not probed.

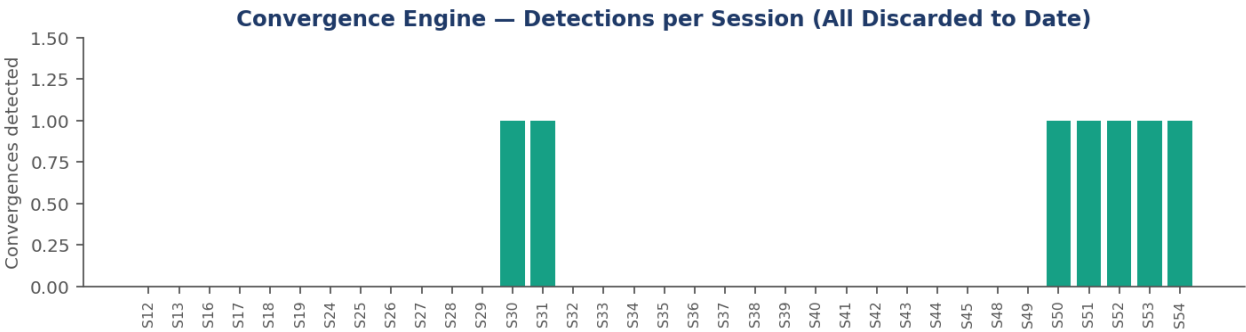

### Active degradations

- **AMF France 404:** Persistent since S49. S54 probed 6 alternate endpoints (3 AMF subpaths, 2 data.gouv, 1 API) — all 404. Dataset likely delisted. Scanner degrades gracefully via FCA / AFM / BaFin.
- **SEC EFTS intermittent 500:** Since S17. Observed on keyword queries only; filing-type scans unaffected.
- **FCA UK HEAD 403:** Persistent. XLSX download path returns 200 and is the production path.
- **USAspending GET 404 on spending\_by\_award:** Expected behavior — endpoint is POST-only.
- **drugs.com 403:** User-agent block. May need header rotation.

## Convergence Engine

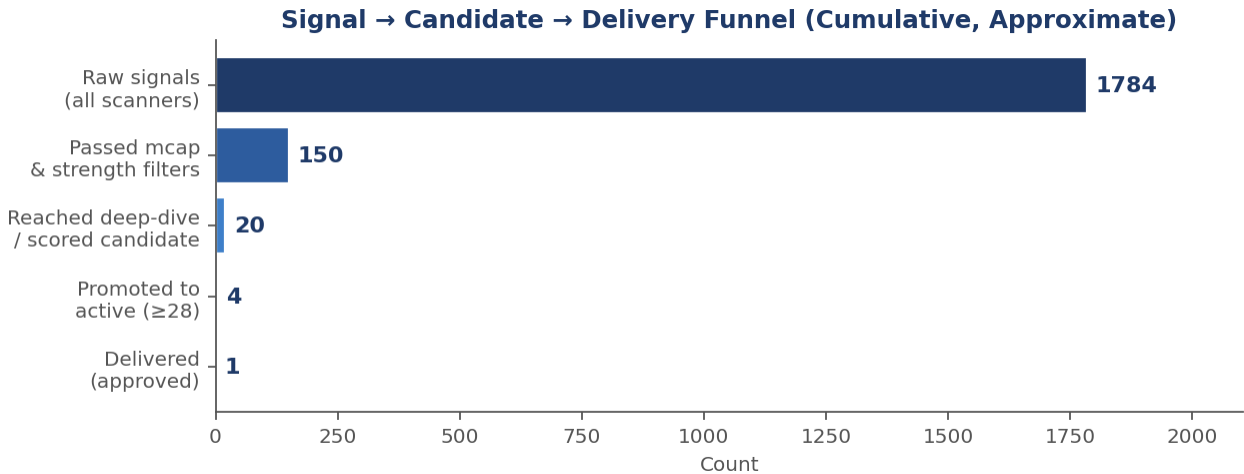

Convergence requires a ticker to surface in  $\geq 2$  strategies within a rolling 21-day window. Six detections since inception; none have converted to a scored candidate — AMT (S30-S31) was 2023 historical footnote noise; FBLG (S50-S54) is recurring sub-\$215M mcap false positive. S54 recommends adding FBLG to the suppression list.

| Detection                   | Sessions | Entity                        | Disposition         | Root Cause                                                                                    |
|-----------------------------|----------|-------------------------------|---------------------|-----------------------------------------------------------------------------------------------|
| AMT (congressional + edgar) | S30-S31  | American Tower                | Rejected (FP)       | ARS PDF 'strategic alternatives' = 2023 India footnote; Ro Khanna child-account SELL = noise. |
| FBLG (convergence engine)   | S50-S54  | First Business Financial Corp | Discarded sub-floor | Recurring ~\$6-13M mcap; below \$215M floor. S54 suppression-list action pending.             |

## Outcome Yield Funnel

From raw signal count through to a single delivered candidate (TVTX, APPROVED 2026-04-13). Pass-through rates tighten substantially at the mcap/strength filter and the score- $\geq 28$  promotion bar. Numbers are approximate — 'reached deep-dive' includes names that were scored but later rejected (e.g., APAD, NUCL, LODE, AMT) and non-tradeable tags (ORCA, BEREN).

## Candidate ledger

| Ticker | Source Strategy          | Peak Score  | Current Status               | Outcome                                                                    |
|--------|--------------------------|-------------|------------------------------|----------------------------------------------------------------------------|
| TVTX   | FDA PDUFA                | 29.75       | Delivered 2026-04-13         | APPROVED (narrow label — FSGS w/o nephrotic syndrome, Boxed Warning, REMS) |
| AXSM   | FDA PDUFA + web research | 30.75       | Active (T-14 window)         | PDUFA 2026-04-30 — 22 clean kill sweeps                                    |
| VERA   | FDA PDUFA + web research | 30.50       | Active                       | PDUFA 2026-07-07 — BTD + Priority Review + Accelerated Approval            |
| VRDN   | FDA PDUFA                | 31.5 → 26.0 | Watchlist (demoted S26)      | REVEAL-1 SC miss damaged franchise; veligrotug IV PDUFA intact Jun 30      |
| MNKD   | FDA PDUFA                | 26.75       | Watchlist                    | Afrezza pediatric — re-evaluate T-20 (~May 8)                              |
| ARVN   | FDA PDUFA                | ~22.5       | Watchlist / deep dive queued | First PROTAC; Pfizer partner; PDUFA Jun 5                                  |
| HROW   | ESMA Short (BaFin)       | 22.5        | Watchlist                    | SI 21.1%; no hard catalyst                                                 |
| ACHV   | FDA PDUFA                | —           | Gated (mcap floor)           | Cytisinicline BTD; currently \$184M, needs \$215M floor                    |
| AMT    | Congressional + EDGAR    | —           | Rejected (FP)                | 2023 India footnote noise; D-029 rubric                                    |

## Code Health and Operational Discipline

| Metric                                   | Value                                          | Trend                              |
|------------------------------------------|------------------------------------------------|------------------------------------|
| Tools in codebase                        | 14 (post-S46 audit)                            | Steady                             |
| py_compile clean rate (last 15 sessions) | 100%                                           | Improved vs S17–S19                |
| Truncation incidents                     | 0 since S46 fix                                | Resolved (D-049 rewrite procedure) |
| Scheduled task cadence                   | Operational every 3h + maintenance at :50 past | Stable                             |
| Concurrency lock conflicts               | 0 observed                                     | SESSION_LOCK.md discipline holds   |
| Decisions logged (DECISIONS.md)          | ~50 D-### entries                              | Steady accumulation                |
| Open questions outstanding               | 3 deferred (CNMV, log growth, sandbox timeout) | Stable                             |

### Notable hardening decisions

- **D-029** — Congressional signal-strength rubric: suppressed 165+ strength-2 mega-cap noise from S24/S31.
- **D-030** — EDGAR 4-category daily rotation: prevents single-category fatigue; per-category whitelists.
- **D-031** — EDGAR form whitelist: drops SPAC / S-4 / DEFM14A / N-6 boilerplate at ingest.
- **D-035** — ESMA same-day basket detection: caps Info Asymmetry at 3.0 for French-cluster basket events.
- **D-043** — EDGAR KEYWORD\_SKIP\_FORMS (ARS, DEF 14A, DEFA14A, fund filings): addressed AMT false positive root cause.
- **D-044** — Cross-scanner mcap cache (mcap\_cache.py, 24h TTL): reduced redundant yfinance calls.
- **D-046** — FDA approval cross-check: auto-disqualifies already-approved entries (caught CORT post-factum S40).
- **D-049** — File truncation rewrite procedure: addresses platform VM mount sync bug.
- **D-050** — Auto-discover dedup hardening (S47): no regressions observed.

## Appendix: Per-Session Signal Ledger

Raw signal counts by scanner for every session with explicit numbers in *PROGRESS\_LOG.md*. '—' indicates the session log did not record an explicit per-scanner count (typically maintenance or partial-run sessions).

| Session | Date       | EDGAR | Rot.       | Cong. | ESMA | Contract | FDA | Conv. | Total | Notes                                     |
|---------|------------|-------|------------|-------|------|----------|-----|-------|-------|-------------------------------------------|
| S12     | 2026-04-09 | —     | —          | 12    | 570  | 3        | 8   | —     | 593   | timeout; positions not signals            |
| S13     | 2026-04-09 | 71    | —          | 0     | 9    | 0        | 8   | 0     | 88    | timeout-but-wrote                         |
| S16     | 2026-04-10 | 21    | M&A;       | 0     | 0    | 0        | 10  | 0     | 31    |                                           |
| S17     | 2026-04-10 | 0     | —          | 0     | 0    | 0        | 10  | 0     | 10    | timeout                                   |
| S18     | 2026-04-10 | 0     | —          | 0     | 0    | 0        | 10  | 0     | 10    | 500-errors; FCA down                      |
| S19     | 2026-04-10 | 8     | M&A;       | 0     | 119  | 0        | 10  | 0     | 137   | cached snapshot                           |
| S24     | 2026-04-10 | 82    | governance | 167   | 0    | 0        | 13  | 0     | 262   |                                           |

## Report metadata

|                             |                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Generated (UTC)</b>      | 2026-04-14 10:07:38                                                                                                      |
| <b>Report type</b>          | Tool Performance Dashboard (operational + outcome metrics)                                                               |
| <b>Coverage</b>             | Since inception — S1 through S54 (last session 2026-04-14 07:15 UTC)                                                     |
| <b>Data sources</b>         | PROGRESS_LOG.md (explicit per-session lines), reports/*.md (6 daily reports), SESSION_STATE.md, candidates/*.md (ledger) |
| <b>Methodology</b>          | Numbers are hand-extracted from explicit log entries — heuristic regex parsing rejected for accuracy                     |
| <b>Output path</b>          | reporting_layer/performance_reports/System_Performance_2026-04-14.pdf                                                    |
| <b>Read-only constraint</b> | No writes to investment_discovery_system/ — enforced                                                                     |
