

Non-US Discovery System — Active Candidates

All immediate-route candidates (score ≥ 28) across every scanner — generated 2026-04-15

18 immediate-route candidates across three live scanners: **tdnet** (Japan, 16), **lse_rns** (UK, 1), **asx** (Australia, 1). The Phase 4 SEDAR+ scanner ran today but produced no signals (sedar_2026-04-15_processed.json is empty). Phases 5–9 (HKEx, KIND, BSE/NSE, CVM, BMV) are not yet built. There are also 21 watchlist entries (score 22–27) excluded from this report by request — they live in candidates/watchlist/.

Coverage and methodology

Active scanners (with candidates this week): tdnet (Japan TDnet), lse_rns (UK LSE RNS), asx (Australia ASX). **Active scanners with no candidates this run:** sedar (Canada SEDAR+) ran 2026-04-15 and returned 0 signals — the yfinance-news primary source produced no items above the score floor in this window. **Not yet built:** hkex (Hong Kong), kind (Korea), bse_nse (India), cvm (Brazil), bmv (Mexico). **Routing:** each candidate passed Stage-1 triage (US\$300M market-cap floor, novelty/dedup, boilerplate filter, D-002 translation-confidence floor), was entity-resolved via OpenFIGI (D-003), deduplicated and convergence-annotated (D-001 / D-004), then scored on the seven-dimension rubric. Score ≥28 → immediate (full markdown stub); 22–27 → watchlist (JSON pointer); 14–21 → archive; <14 → discard. **Status:** all 18 candidates are pending_deep_dive — scanner-generated stubs whose thesis, kill conditions, and catalyst maps need human deep-dive work before any sizing decision. Source markdowns live in [non_us_discovery_system/candidates/](#).
