Translation notes

Japanese source. Translation pattern is unambiguous at tc=0.92. Deep-dive must still read the PDF for specifics (price, premium, timing, counterparty).

Company context

- Market cap: \$351M USD
- Sector / sub-sector: TODO (deep-dive)
- Recent price action: TODO (30/90d)
- Cross-listings: TODO (check HK / ADR / LSE)

Thesis statement (to be completed by deep-dive)

TOB / tender-offer target. Typical playbook: long target into spread; size to annualized IRR. If the filer (buyer side) is the ticker, re-check direction during deep-dive — trading companies (8001 Itochu) sometimes file as the *buyer*, in which case thesis is different.

Steelman of the opposite view

****Pending deep-dive.**** Likely angles:

- Market already priced in the disclosure (no edge).
- Terms / magnitude less favorable than headline implies.
- Counter-catalyst exists (regulatory, activist, competing bid).
- Translation / interpretation error — revisit tc if direction flips on re-read.

Web research layer (mandatory — pending)

- Nikkei / Reuters / Bloomberg coverage of Yomeishu Seizo Co.,Ltd.
- Peer precedents for the same signal_type in JP market
- Shareholder register (activist presence?)
- Analyst coverage & recent target price moves

Kill conditions

- ****Kill 1:**** Subsequent TDnet filing revising terms unfavorably — flip or cut.
- ****Kill 2:**** Board or independent committee opposes (for takeover signals); regulatory action escalates (for litigation signals).
- ****Kill 3:**** Translation re-read flips thesis direction → exit.
- ****Kill 4:**** Scanner flags superseding signal at the next cycle.

Position sizing

Satellite (2–5%). Adjust for liquidity of 2540.T; \$351M mcap implies moderate liquidity — verify ADV before sizing.
