

Predictive Discovery Limited — PDI.XASX

Merger implementation (Robex Resources scheme of arrangement) · deep-dive · 2026-04-16

Ticker	PDI.XASX (ASX)
Counterparty	Robex Resources Inc. (TSX-V: RBX)
Issuer FIGI	BBG0017X3YM5
Market cap	USD ~1,782m (AUD ~2,700m at 0.66 AUDUSD)
Signal date	2026-04-15 (ASX announcement 2924-03079443-6A1320718)
Signal type	merger_agreement (scheme of arrangement)
Direction	LONG merger-arb (buy PDI + sell RBX ratio-adjusted) — OR — no-trade procedural
Score	28.0 (immediate route)
Deep-dive date	2026-04-16

Thesis (TL;DR)

Predictive Discovery (PDI.XASX) and Robex Resources (RBX.TSXV) are completing a merger-of-equals announced October 5, 2025, via a Quebec statutory plan of arrangement. As of April 8, 2026, ALL conditions precedent have been satisfied — including Guinea Mining Ministry in-principle approval, Robex shareholder approval (Dec 30, 2025), and PDI conditional TSX listing approval. The transaction is now UNCONDITIONAL with an effective/implementation date of approximately April 15, 2026 and an outside date of April 30, 2026. Exchange ratio: 7.862 PDI shares per Robex share/CDI. Post-close, Robex CDIs will be removed from ASX quotation; PDI continues on ASX and commences trading on TSX under ticker 'PDI'. Combined entity targets 400,000+ oz annual gold production by 2029, anchored by Bankan (Guinea, ~5 Moz resource) and Kiniero (Guinea, Robex producing mine). At PDI A\$0.855 and RBX C\$6.66 with AUDCAD ~0.90, the implied Robex-equivalent via PDI is ~A\$6.72 vs RBX spot A\$6.66 (adjusted), leaving a negligible ~0.9% arb spread — consistent with a deal in final implementation. PRIMARY FINDING: This is a late-stage procedural update, not a new economic event. The merger is functionally done. Tradeable alpha is minimal unless gold spot moves create a temporary dislocation between the two legs.

Company context

Predictive Discovery Limited is an Australia-listed gold exploration/development company. Primary asset: Bankan Gold Project in the Siguiri Basin, Guinea, with ~5 Moz indicated+inferred gold resource and DFS-estimated production of ~250,000 oz/year over a 12-year mine life.

Robex Resources Inc. is a Quebec-domiciled gold producer listed on TSX-V (RBX) with CDIs on ASX. Operating the Nampala mine in Mali and developing the Kiniero project in Guinea. Market cap ~C\$500m.

Combined entity: targets 400,000+ oz annual production by 2029, creating a significant West African gold platform. The merger de-risks Bankan financing by leveraging Robex's Kiniero cash flows.

Arrangement Agreement dated October 5, 2025, subsequently amended. Implementation via Quebec Business Corporations Act statutory plan of arrangement.

Key holders: PDI has a mix of Australian retail, mining-specialist funds (Van Eck, Sprott, Franklin). Robex has Canadian institutional and Quebec-based holders. Register composition may shift post-close.

What the release actually contains

The April 15 ASX announcement (document 2924-03079443-6A1320718) titled 'PDI & Robex Merger Update' confirms the transaction is proceeding to implementation. isPriceSensitive=false on the ASX filing, which is unusual for scheme-of-arrangement updates but consistent with the deal being already unconditional.

Prior April 8 announcement confirmed ALL conditions precedent satisfied: Guinea Minister of Mines in-principle approval (with customary tax/admin conditions in ordinary course), Robex shareholder approval (Dec 30, 2025), and PDI conditional TSX listing approval.

Exchange ratio: 7.862 PDI shares per Robex share or CDI. No cash component. Pure share-for-share.

Outside date: extended to April 30, 2026, providing a 2-week buffer from the ~April 15 effective date.

Post-implementation: Robex CDIs removed from ASX quotation. PDI continues on ASX; TSX listing under 'PDI' expected to commence shortly after implementation.

Implementation timetable published April 9 (GlobeNewswire) details the procedural steps remaining.

Thesis statement

This is a LATE-STAGE MERGER IMPLEMENTATION with effectively zero conditionality risk. The merger is unconditional and the effective date has already arrived (~April 15). From a merger-arb perspective, the opportunity set is extremely narrow: the PDI/RBX cross-ratio at current prices implies <1% spread, and execution friction (cross-currency AUD/CAD, thin Robex TSX-V liquidity, settlement timing) likely exceeds the gross spread. The thesis recommendation is DO NOTHING from a merger-arb standpoint — the deal is done. The interesting forward question is whether the combined PDI entity is a compelling standalone gold-producer investment: ~5+ Moz resource, path to 400 koz/year production, dual ASX+TSX listing broadening the buyer base, Kiniero cash flows funding Bankan development capex. Gold at ~\$3,200/oz (April 2026) provides a strong macro tailwind. However, that is a fundamental gold-equity thesis, not an event-driven merger-arb thesis, and falls outside the scope of this discovery system. Scanner classification: The signal was correctly routed as 'immediate' (score 28.0) — the scanner pattern-matched 'merger' in the title. However, the signal's alpha content is near-zero because the April 15 announcement is a procedural update on an already-unconditional deal, not a new binding agreement or amendment to economic terms. This is consistent with Kill Condition #1.

Catalyst map

Event	Date / Window	Entry trigger	Exit / resolution
Merger effective date	~2026-04-15	N/A (already arrived)	Shares exchanged; arb closes
Robex CDI removal from ASX	Post-implementation	N/A	No more ASX arb leg
PDI TSX listing commencement	Post-implementation	Dual-listing broadens buyer base	Monitor for listing-day flow
Outside date	2026-04-30	Backstop — if implementation delayed	Deal terminates if breached
Guinea Mining Ministry final clearance	In ordinary course	Customary conditions progressing	Delay risk (low)
Post-merger resource update / DFS refresh	H2 2026 expected	Combined resource statement	Fundamental re-rating catalyst
Gold spot moves	Continuous	>\$3,400 supports premium	<\$2,800 pressures equity valuation

Steelman of the opposite view

- Procedural = no trade: The April 15 announcement is a pure implementation update. `isPriceSensitive=false` confirms the ASX itself does not consider this to contain new price-material information. Scanner false-positive on the `\bmerger\b` pattern.
- Arb spread is already closed: With <1% implied spread and cross-currency execution friction, there is no positive-expectancy merger-arb trade here. The market has fully priced the deal completion.
- Gold tape dominance: Any short-term P&L; on either leg will be dominated by gold spot moves (PDI has ~0.8-1.0 beta to gold). The arb is not insulated from underlying.
- Post-close forced selling: Australian index-linked funds may be forced sellers of Robex CDIs being removed from ASX quotation. TSX-listing flow dynamics are uncertain — could create negative drift on the combined PDI entity in the first 2-4 weeks post-implementation.
- Guinea country risk persists: Mining-code reforms, state-participation demands (2022-2024), and geopolitical risk in the Siguiri basin are ongoing. The in-principle approval comes with customary tax/admin conditions that are stated to be in 'ordinary course' but have not yet been finalized.

Kill conditions

Kill condition	Numeric / factual threshold	Where observable
K1: Procedural update only	<code>isPriceSensitive=false</code> ; no new economic terms	ASX announcement — TRIGGERED
K2: Arb spread < 3% annualized	Current spread ~0.9% nominal, ~10% annualized if 1-month close, but net of friction ~0%	PDI.AX / RBX.V cross-pricing

Kill condition	Numeric / factual threshold	Where observable
K3: Regulatory knockback	Guinea condition not cleared by outside date 2026-04-30	PDI ASX announcements
K4: Gold spot crash >8%	Gold below ~\$2,950/oz from current ~\$3,200	COMEX spot / LBMA fix
K5: Implementation fails by outside date	Deal terminates if not effective by April 30	PDI ASX + Robex SEDAR+
K6: Robex board withdrawal	Highly unlikely at this stage — deal is unconditional	SEDAR+ filings

Peer comparables

- De Grey Mining (DEG.ASX): Northern Star acquired for A\$5.0B in 2024-2025. Gold developer-to-producer merger comp.
- Tietto Minerals (TIE.ASX): Zhaojin Mining acquisition via scheme in 2024 (A\$0.58/share). Africa-gold scheme precedent.
- West African Resources (WAF.ASX): Comparable Guinea/Mali gold operator. Market cap ~A\$2.8B. Peer for post-merger PDI valuation.
- Endeavour Mining (EDV.LSE/TSX): Large West African gold producer (~1.4 Moz/yr). Structural comp for combined PDI aspiration.

Position sizing guidance

NO POSITION RECOMMENDED. The merger is unconditional and implementation is imminent. Arb spread is negligible after execution costs. For investors interested in the combined entity as a fundamental gold-equity position, that is a separate thesis outside this event-driven system's scope. If gold creates a temporary dislocation between PDI and Robex-implied value (>3% spread), a satellite arb (1-2% portfolio) could be constructed using PDI.AX long + RBX.V short (ratio-adjusted at 7.862:1), hedged for AUDCAD via forward contract. PDI ADV is ~A\$5-10m; Robex ADV on TSX-V is thinner (~C\$3-5m). Both legs need careful VWAP execution. Options expression impractical on both sides.
