

Investment Discovery (US) — Candidates

2026-04-16 · 9 candidates

AVNS

Hypothesis

American Industrial Partners signed definitive agreement to acquire AVNS for \$25.00 cash per share (72.1% premium). All-cash deal, standard antitrust review expected, shareholder approval likely. Market pricing ~95% completion probability at 1.3% spread.

Next key dates

2026-05-15 — HSR 30-day clock clearance window

2026-06-15 — DEF 14A proxy filing expected

2026-07-30 — Expected shareholder vote window

Category: merger_arb · **Status:** active · **Conviction:** high

Deep-dive: [Candidates/deep_dives/pdf/AVNS_Investment_Thesis_2026-04-14.pdf](#)

AXSM

Hypothesis

AXS-05 (dextromethorphan + bupropion) for Alzheimer disease agitation has 60-70% approval probability based on 3-of-4 Phase 3 hits, Priority Review, and commercial prep behavior inconsistent with CRL expectation. Market implies ~45-55%, creating ~4.5% expected-value mispricing.

Next key dates

2026-04-30 — PDUFA decision for AXS-05 ADA sNDA

2026-05-04 — Q1 2026 earnings

Category: drug_approval · **Status:** active · **Conviction:** high

Deep-dive: [Candidates/deep_dives/pdf/AXSM_Investment_Thesis_2026-04-13.pdf](#)

GSAT

Hypothesis

Amazon-Globalstar merger arb with shareholder vote contractually eliminated (Thermo/Monroe 45.75% Stockholder Support Agreement executed Apr 13 2026). At \$80.64 reference, 10.6% gross spread to \$89.21 floor (post maximum \$110M HIBLEO-4 milestone adjustment) over a 15-18 month close horizon produces ~7-9% annualised return. Primary residual risk is FCC spectrum transfer review; HSR/DOJ and milestone execution are secondary.

Next key dates

2026-05-15 — Schedule 14C information statement expected (30 days post-8-K)

2026-05-15 — HSR filing and 30-day waiting period expected

2026-06-15 — S-4 registration statement for stock-election consideration (45 business days from signing)

2027-06-30 — Expected close (base case mid-2027, contingent on FCC + HIBLEO-4 milestones)

Category: merger_arb · **Status:** active · **Conviction:** medium

RGR

Hypothesis

Beretta Holding S.A. (RGR's largest individual shareholder at 9.95%) has launched a multi-track activist campaign — a \$44.80/share cash partial tender offer for an additional ~20% of shares (subject to Pill exemption) and a four-nominee minority slate at the 2026 Annual Meeting. The market has only modestly repriced (+4.2%, still 5.8% below the publicly disclosed tender price) on declining volume, indicating it is heavily discounting the Pill-exemption probability and the optionality of a Chancery test or negotiated settlement. Asymmetric setup: tender clears +5.8%, settlement +10–25%, withdrawal -5–10% downside floored by Beretta's continuing 9.95% support.

Next key dates

TBD — Board response to Pill-exemption ask (deadline already passed Mar 31)

TBD — Beretta files Delaware Chancery action (if Pill exemption denied)

TBD — Ruger DEF 14A filing — fixes 2026 Annual Meeting date

TBD — ISS / Glass Lewis recommendations (T-14 to T-10 from AM)

Category: activist · **Status:** active · **Conviction:** high

RPAY

Hypothesis

Forager Fund accumulated 12.9% of RPAY; board adopted poison pill with 12.5% trigger calibrated precisely below Forager's stake. Three 13D amendments in 30 days suggest imminent proxy contest or sale demand. Activist campaigns of this type historically deliver 30-60% returns over 6-18 months.

Next key dates

TBD — Forager 13D/A Amendment No. 3 (responsive filing)

TBD — PREC14A preliminary proxy statement (if Forager formally contests)

TBD — DEF 14A annual meeting proxy (nomination window critical catalyst)

Category: activist · **Status:** active · **Conviction:** high

Deep-dive: [Candidates/deep_dives/pdf/RPAY_Investment_Thesis_2026-04-15.pdf](#)

SEM

Hypothesis

SEM is a signed WCAS XIV + Ortenzio family take-private at \$16.50/sh cash with only a 0.73% gross spread over a ~7.5-month horizon to the 2026-12-01 Outside Date — ~1.1% annualized, below risk-free. Deal certainty is relatively high (top-quartile PE sponsor + family rollover) but the risk/reward is asymmetric (+0.7% upside vs ~-14.5% break downside). Watchlist stance: re-engage only on spread widening to 3%+ via HSR pushback, shareholder litigation bump, or financing disruption.

Next key dates

2026-04-15 — PREM14A + SC 13E-3 filed (deal disclosure)

2026-05-15 — DEF 14A definitive proxy expected (20-45 days post-PREM14A)

2026-05-15 — HSR 30-day waiting period clearance window (approx)

2026-12-01 — Outside Date (termination trigger)

Category: merger_arb · **Status:** active · **Conviction:** low

TVTX

Hypothesis

[backfill pending on next deep-dive run]

Next key dates

—

Status: delivered

VERA

Hypothesis

Atacicept (dual BAFF+APRIL inhibitor) for IgAN has exceptional NEJM Phase 3 data (46% proteinuria reduction, 68% Gd-IgA1 reduction, 81% hematuria resolution). Market underestimates commercial positioning vs sibeprenlimab based on superior efficacy and potential pricing parity with \$292.5K benchmark.

Next key dates

2026-07-07 — PDUFA decision for atacicept (Accelerated Approval)

2026-05-15 — Mid-Q2 2026 earnings (commercial prep tone)

Category: drug_approval · **Status:** active · **Conviction:** medium

Deep-dive: [Candidates/deep_dives/pdf/VERA_Investment_Thesis_2026-04-14.pdf](#)

VRDN

Hypothesis

Veligrotug (IV anti-IGF-1R) for thyroid eye disease has 70% PRR vs 5% placebo in active TED and 56% vs 8% in chronic TED. Stock down 51% from highs due to elegrobart competitive pressure, not veligrotug approval risk. PDUFA June 30 could trigger re-rating.

Next key dates

2026-06-30 — PDUFA decision for veligrotug (Priority Review + Breakthrough)

2026-05-31 — REVEAL-2 Phase 3 elegrobart results (chronic TED)
