3. SESSION_STATE.md (head)

Session State — The Relay Baton

Last updated: 2026-04-15 22:25 UTC by Scheduled Session 63
Next session: Next operational / maintenance run (~2026-04-16 00:00 UTC)

TOP HEADLINE — S63 COMPLETED RGR WEB-RESEARCH LAYER. **SCORE UPGRADED 33.5 → ≈36.0**. DISCOVERED DUAL-TRACK BERETTA CAMPAIGN: (1) SC TO-C TENDER FOR 20.05% AT \$44.80/SH BLOCKED BY 15% POISON PILL; (2) PROXY FIGHT WITH 4-NOMINEE SLATE INCL. ROBERT ECKERT. 11+ DFAN14A SINCE MAR 5. TENDER BID +5.8% ABOVE MARKET \$42.35. CANDIDATE FILE REVISED WITH 7 KILL CONDITIONS. ALL 5 ACTIVES CLEAN ON BATCH KILL-SWEEP. POTENTIAL_OPPORTUNITIES.DOCX REGENERATED.

Key Findings This Session

- **EDGAR scanner**: 3 signals (HNRG, MRVL, RGR). Triage:
 - **HNRG**: FP — "change in control" in RSU-vesting boilerplate (8-K). Not candidate-grade.
 - **MRVL**: FP — Weil Gotshal "Consent" in shelf indenture filing (routine legal exhibit). Not candidate-grade.
 - **RGR**: KNOWN — same PRER14A signal that S62 already promoted. Used as trigger to execute mandatory web-research layer.
- **RGR WEB-RESEARCH LAYER COMPLETE** (S62→S63 highest priority task):

- Direct EDGAR EFTS query for "Beretta Holding" + "Sturm, Ruger" returned 31 hits.
- **MAJOR DISCOVERY**: Beretta filed **SC TO-C** tender offer Mar 26 for additional 20.05% at \$44.80/share cash (would push Beretta from 9.95% to 30.0%). Tender **BLOCKED** by Ruger's 15% poison-pill trigger.
- **MAJOR DISCOVERY**: Beretta sent **pill-exemption request** to Ruger board with **Mar 31 deadline** – passed without exemption granted.
- **MAJOR DISCOVERY**: 11+ DFAN14A filings from Beretta since Mar 5 (vs S62 understanding of campaign starting Apr 7). Campaign has been live 6+ weeks longer than S62 documented.
- **Counsel quality**: Olshan Frome Wolosky (Beretta – top-tier activist) vs Cravath, Swaine & Moore + Sullivan & Cromwell (Ruger – top-tier defense). Both sides escalated to top-of-market firms.
- **Robert Eckert** identified as solicitation participant (potential ex-Mattel CEO match – verification deferred to next session).
- **Score upgrade rationale**: Original score 33.5 was based on proxy-only thesis. Adding tender-offer track (+ implicit collar at \$44.80) + pill-exemption blockage (forces escalation) + extended campaign duration + top-tier counsel both sides → score ≈36.0.
- **RGR candidate file revised** with: corrected timeline, revised 7-dim score breakdown, expanded catalyst map, 7 explicit kill conditions K-1 through K-7, and 7 mandatory next-session monitoring tasks.

3. **AXSM T-14 intensive kill-sweep #25**: SEC EFTS query CIK 0001579428 returned **0 hits** for 8-Ks Apr 15-16. Price \$184.18 unchanged. Thesis intact.

4. **Batch SEC kill-sweep across all 5 actives** via data.sec.gov submissions JSON (1-day window):

- **RPAY**: CLEAN. No new filings beyond known Apr 13 SCHEDULE 13D/A and Apr 14 8-K/8-A12B. No Forager #3.
- **VERA**: CLEAN. No new filings beyond known Apr 7 annual-meeting package.
- **AVNS**: CLEAN. No new filings since Apr 10 Form 4.
- **GSAT**: Only routine Thermo Capital Form 4/144 (insider sale – non-strategic). No S-4 yet.
- **RGR**: Only known PRER14A from Apr 15.

5. **Potential_Opportunities.docx regenerated** at all 3 paths (39,911 bytes each) reflecting RGR upgrade.

6. **TIME_SENSITIVE.md refreshed**: S63 timestamp, RGR row updated to ≈36.0 with full dual-track narrative and tender-offer details. All prices verified via yfinance.

7. **Report Summary/system_status_report.md** updated with S63 headline.

S64 FIRST ACTION

- AXSM T-13 intensive kill-sweep #26** (Apr 16 = T-14, becomes T-13 by next operational run after midnight UTC). Same daily protocol.
- RGR daily monitoring** (7 specific items now documented in candidate file): DEF 14A (fixes AM date), new DFAN14A/DEFC14A from Beretta, settlement 8-K, pill amendment 8-K, tender amendment SC TO-C/A, Form 4 activity, ISS/Glass Lewis recs.
- Optional verify Robert Eckert identity** – high probability ex-Mattel CEO; if confirmed, strengthens governance bench.
- RPAY monitoring**: Forager 13D/A #3 watch, PREC14A feed.
- AVNS monitoring**: HSR filing (~mid-May), topping bid, special-meeting proxy timing.
- GSAT monitoring**: S-4 filing watch (deadline 2026-06-15, T-60).
- EDGAR rotation**: S62 advanced to governance (index 3); S63 ran without --rotate (defaulted to activist). **Next = activist (index 0) wraps around** with --rotate.
- Q-015 filter implementation**

4. PROGRESS_LOG.md (tail ~80 lines)

Done ■

- Cold-start orientation: SESSION_STATE.md, INSTRUCTIONS.md, TIME_SENSITIVE.md, RGR candidate file (truncated reread).
- Date verification: bash `date -u` confirmed 2026-04-15 (per memory directive – never trust date-of-week from prior files).
- Scanner validation: all 11 core scripts py_compile CLEAN.

- EDGAR scanner ran (no --rotate, defaulted to activist): 3 signals – HNRG, MRVL, RGR.
- HNRG: FP. "change in control" in RSU vesting boilerplate (8-K). Discarded.
- MRVL: FP. Weil Gotshal "Consent" in shelf indenture filing (routine legal exhibit). Discarded.
- RGR: KNOWN. Same PRER14A as S62. Used as trigger to execute mandatory web-research layer.
- **RGR WEB-RESEARCH LAYER COMPLETE** (S62→S63 highest-priority handoff item):
- Direct EDGAR EFTS query for "Beretta Holding" + "Sturm, Ruger" → 31 hits.
- **MAJOR DISCOVERY 1**¹: SC T0-C tender offer Mar 26 – Beretta tendering for additional 20.05% (would push to 30.0%) at \$44.80/share cash. **BLOCKED by Ruger 15% poison-pill trigger.**
- **MAJOR DISCOVERY 2**²: Pill-exemption ask passed Mar 31 deadline without grant.
- **MAJOR DISCOVERY 3**³: 11+ DFAN14A filings from Beretta since Mar 5 (campaign live 6+ weeks longer than S62 documented).
- **Counsel quality**⁴: Olshan Frome Wolosky (Beretta, top-tier activist) vs Cravath, Swaine & Moore + Sullivan & Cromwell (Ruger, top-tier defense).
- Robert Eckert identified as solicitation participant (probable ex-Mattel CEO; verification deferred).
- **Score upgraded 33.5 → ≈36.0** with rationale: dual-track campaign + tender bid implicit collar + pill-exemption blockage + extended duration + top counsel both sides.
- RGR candidate file revised: ~140 lines added including Session 63 update log, revised 7-dim score breakdown, updated catalyst map, 7 explicit kill conditions K-1 through K-7, and 7 mandatory next-session monitoring tasks.
- AXSM T-14 intensive kill-sweep #25: SEC EFTS CIK 0001579428 → 0 hits Apr 15-16. CLEAN. \$184.18 unchanged.
- Batch SEC kill-sweep across 5 actives via data.sec.gov submissions JSON (1-day):
- RPAY: CLEAN (no Forager #3).
- VERA: CLEAN.
- AVNS: CLEAN (last filing Apr 10).
- GSAT: only routine Thermo Form 4/144.
- RGR: only known PRER14A.
- yfinance verified all 15 candidate prices.
- TIME_SENSITIVE.md refreshed (S63 timestamp; RGR row upgraded with full dual-track narrative; all prices).
- Potential_Opportunities.docx regenerated at all 3 paths (39,911 bytes each).
- Report Summary/system_status_report.md updated with S63 headline.
- SESSION_STATE.md overwritten with full S63 handoff (including 2 new warnings 0n background-cwd, 0o webfetch-oversize; 2 new scanner-improvement recommendations 27, 28).

Next ■■

- AXSM T-13 daily deep-check (Apr 17 = T-13).
- RGR daily monitoring (7 specific items per candidate file).
- Optional: verify Robert Eckert identity (probable ex-Mattel CEO).
- Continue RPAY / AVNS / GSAT / VERA monitoring per cadence.
- EDGAR scanner: rotate back to activist (index 0, wraps around) with --rotate.

Blockers ■■

- None new. All known issues catalogued in SESSION_STATE warnings 1-28.
- Q-015 filter implementation still pending (now 6 FP/coverage sub-patterns documented).
- Q-016 terminal-marker validation still pending.

Reviewed ■

- All factual claims traceable to primary sources (EDGAR EFTS, data.sec.gov, yfinance).
- Adversarial check on RGR upgrade: validated by primary-source EDGAR filings (not secondary commentary).
- Score upgrade documented with explicit dimension-by-dimension breakdown in candidate file.
- Date freshness: yfinance prices retrieved live this session; SEC EDGAR queries hit live API.

Lock⁵: will release to UNLOCKED at shutdown.

Maintenance Session – 2026-04-15 22:59 UTC (maintenance-2026-04-15)

Type⁶: Scheduled maintenance (10-min pre-operational cycle).

Lock state at start⁷: UNLOCKED (last release 22:31:05Z).

Lock acquired⁸: 22:59:33Z.

****■ Done**:**

- Phase 2a – py_compile all 14 tools: ALL OK; tail-inspection confirmed no truncations.
- Phase 2b – __pycache__ delete: blocked by sandbox quirk 01 (known, non-blocking).
- Phase 2c – API reachability: 7/7 returned 200 (SEC EFTS, Capitol Trades, USAspending, ClinicalTrials, openFDA, FCA UK, OpenFIGI).
- Phase 2d – signals/ health: no oversize convergence files; dedup files within window (oldest 6d, all under respective windows).
- Phase 3a – pdufa_watchlist.json: 0 stale active entries; MNKD/IONS/RARE "duplicates" are legitimately distinct drugs; non-US tickers properly tagged via `status: non\_tradeable`.
- Phase 3b – edgar_rotation_state.json: all 4 categories scanned within last 14h; rotation_index=0 as expected.
- Phase 3c – orphans: zero (>72h) _scanner_result_*.json files.
- Phase 4 – code quality: no hardcoded paths in tools; 19 silent `except: pass` sites identified but ****not modified**** (operational task starts in ~10 min; protocol 4d defers to user-approved cleanup).
- Maintenance report written to `working/maintenance\_202`

5. TIME_SENSITIVE.md

Time-Sensitive Investments – Key Date Tracker

****Purpose****: Consolidated, chronologically-sorted view of all active and watchlist candidates with their next material event. Updated every scheduled session.

****Last updated****: 2026-04-15 22:22 UTC by Scheduled Session 63

****Today's date****: 2026-04-15

****Next update****: Next operational scanner run (approx. 2026-04-16 00:00 UTC)

How to Read This File

Every row is a live investment thesis with a specific, dated catalyst. Rows are sorted by next key date, soonest first. The urgency tier helps prioritize attention:

- ■ ****URGENT**** – next key date within 14 calendar days. Daily monitoring active.
- ■ ****APPROACHING**** – next key date within 14–45 days. Weekly monitoring.
- ■ ****TRACKING**** – next key date >45 days out. Routine monitoring.
- ■ ****WATCHLIST**** – signal detected but below active-candidate threshold, or event window is extended.

Scoring: active candidates are ≥ 28.0 on the 7-dimension rubric. Watchlist is 22–27.9.

Active & Watchlist Candidates (sorted by next key date)

#	Tier	Ticker	Score	Reason for Investment	Tool / Strategy	Next Key Date	What Happens Then	Current Price	Mcaps
1	■ URGENT	[AXSM](candidates/AXSM_ADA_PDUFA.md)	30.75	AXS-05 sNDA for Alzheimer Disease Agitation (ADA). Priority Review, no AdCom, 3/4 pivotal Phase 3 trials positive, Auvelity safety database exonerates major class-safety concerns, commercial prep (sales force 300→600, balipodect acquisition) inconsistent with internal CRL expectation. Thesis: approval probability ~60–70% vs. market implicit ~45–55%. Expected-value mispricing ~4.5%. FDA PDUFA Calendar (`tools/fda_pdufa_pipeline.py`) **2026-04-30** (T-15, intensive window active) **FDA PDUFA decision on AXS-05 for ADA**. Binary event. Approval → expect +25–35%. CRL → expect -35–50%. **S63**: CLEAN – kill-sweep #25 all-clear. SEC EFTS: zero 8-K filings CIK 0001579428 Apr 15–16. Price \$184.18 unchanged vs S62. Thesis intact. \$184.18 \$9.42B					
2	■ URGENT	[RPAY](candidates/RPAY_Forager_ActivistPoisonPill.md)	30.0	Board adopted stockholder rights plan (poison pill) 2026-04-13 with aggressive 12.5% trigger. Same day, activist Forager Fund L.P. filed 13D/A disclosing 12.9% stake – trigger is numerically calibrated just below Forager's position. Three 13D/A amendments in 30 days indicate aggressive accumulation. Defensive tailor-fit signals board anticipates proxy contest or hostile offer. Market pricing as routine boilerplate; actual signal is near-term activist campaign. **S63**: CLEAN – no new filings beyond known Apr 13 SCHEDULE 13D/A and Apr 14 8-K / 8-A12B. No Forager 13D/A #3. Price \$3.15 unchanged vs S62. EDGAR Keyword Scanner – governance + activist rotations (`tools/edgar_filing_monitor.py`) **Days-weeks** (expect Forager 13D/A #3 or RPAY strategic response) Next catalyst = Forager's responsive filing, or any PREC14A preliminary proxy contest. In 1-3 quarters: potential strategic review, sale, or board settlement. Upside 30–60% on M&A; downside 15–25% if activist capitulates. \$3.15 \$275M					
3	■ APPROACHING	[AVNS](candidates/AVNS_merger_arb_AIP_2026-04-14.md)	28.5	American Industrial Partners (PE) announced all-cash acquisition at \$25.00/share (72.1% premium to Apr 13 close). Standard PE take-private – low antitrust risk, board unanimous, 23.4M shares traded Apr 14 confirms announcement. Spread to cap is \$0.28 (1.13%) – market pricing ~95%+ deal completion. **S63**: CLEAN – no new filings since Apr 10 Form 4. No topping bid / no HSR second request / no litigation. EDGAR Keyword Scanner – mna category (`tools/edgar_filing_monitor.py`) **~Late May 2026** (special meeting proxy filing expected) Definitive proxy for merger vote typically 4–8 weeks after signing. HSR waiting period (30 days from filing) expected to clear ~mid
