AEON Fantasy (4343.XTKS) — Non-operating income + special losses booking

> **STATUS: pending_deep_dive.** Automated-scanner stub. Do not act on this alone.

TL;DR

On 2026-04-09 (04:30 UTC / 13:30 JST) AEON Fantasy — the indoor family entertainment / kids-amusement subsidiary of the AEON group, operating "Mollyfantasy" and "Kidzooona" arcades inside AEON malls — released a TDnet filing titled ██████████ ("Notice of booking of non-operating income and special losses"). Scanner classifies signal_strength=4, thesis_direction=short, tc=0.88 (above the 0.85 direction-allow floor). Score 31 — immediate-route. The dual booking (non-op income AND special losses in the same release) is unusual; the most common pattern is an insurance/tax refund recovery on the income side paired with store-closure/impairment charges on the loss side. Market cap \$311M USD is just above the floor — low liquidity.

Source signal

- **Source URL:** https://www.release.tdnet.info/inbs/140120260409500600.pdf
- **Filing date/time:** 2026-04-09 04:30 UTC (13:30 JST)
- **Local-language headline:** ████████████████████████████████
- **Signal ID:** 6b4296297b9890745bbe6fb2f7252f10

Translation notes

Translation confidence 0.88 — above the 0.85 direction-allow floor but below high-confidence. Direction tag short t is pattern-matched on ■■■■ ("special losses"). Deep-dive MUST read the PDF to confirm:

- Actual yen magnitude of the special loss
- Cause (store closure? impairment of overseas subsidiaries, e.g. China/ASEAN? non-recurring restructuring?)
- Size of the offsetting non-operating income (insurance recovery? gain on sale? foreign-exchange?)
- Net P&L impact vs. prior guidance

Company context (to be completed by deep-dive)

- Market cap: \$311M USD (JPY ~¥46B at 150 JPY/USD). At the \$300M floor — liquidity-constrained for institutional sizing.
- Sector: Consumer Services / Leisure (amusement/entertainment).
- Parent: AEON Group (8267 itself saw a separate TDnet tender-offer signal this cycle — cross-reference).
- Business: indoor kids-amusement arcades operated inside AEON malls in Japan + overseas (China, ASEAN). Overseas expansion is the known impairment-risk area.
- Fiscal year: AEON Fantasy's FY ends February, so this April 2026 filing likely relates to FY2026 (Feb 2026) results preview OR an FY2027 (Feb 2027) Q1 pre-announcement.
- 30/90-day price: TODO. Pull from yfinance 4343.T.
- Recent news: TODO — check Nikkei, Bloomberg JP for overseas store-closure rumors, China same-store-sales warnings, or wage-cost pressure stories in Q1 2026.

Thesis statement (to be completed by deep-dive)

Pending. Direction pre-tagged short — standard TDnet  pattern.

Deep-dive must:

- Read the PDF to extract:
 - Special loss amount (JPY), and line-item (impairment, restructuring, litigation, inventory write-down)
 - Non-operating income amount and source
 - Net impact on FY guidance (has management revised the forecast?)
 - Whether a concurrent ■■■■■■■■ ("guidance revision") filing was made
- Check for companion filings on the same day (4343 TDnet index for 2026-04-09)
- Size the loss vs. consensus FY2026 net income (Nikkei/Bloomberg JP consensus)
- Consider instruments:
 - **Straight short 4343** — direct but low liquidity (avg daily volume thin)
 - **Pair short 4343 vs. long 8267 (AEON parent)** — if the loss is 4343-idiosyncratic, the parent may be insulated
 - **Avoid options** — Japan single-name options on mid-caps at this size are illiquid

Steelman of the opposite view

A "non-op income + special loss" dual booking can be **net-neutral or net-positive** for cash earnings if the non-operating income is a large insurance recovery, tax refund, or gain-on-sale of a non-core asset, and the special loss is a one-time overseas impairment that management had already telegraphed. In that scenario:

- The market has priced in the impairment already (30-day drift would show this)
- The offsetting income is fresh news
- The stock can rally on the release because cash EPS beats the prior-guidance midpoint
- A reflexive short on ■■■■■ headline gets run over

Before sizing any short, deep-dive must confirm the special loss is NET LARGER than the offsetting income, that guidance is being cut (not held), and that the market had not telegraphed the impairment already.

Web research layer (deep-dive TODO)

- Search Nikkei Asia for "AEON Fantasy China" / "Mollyfantasy" closures in last 90 days
- Check IR calendar at <https://www.fantasy.co.jp/ir/> for FY2026 results date
- Look for analyst notes from Nomura, Daiwa, SMBC Nikko — recent rating changes or target cuts
- Cross-reference AEON group (8267) same-week filings — parent-level color on the subsidiary

Kill conditions

- **Kill if** deep-dive PDF shows net non-op income > special loss (reverses direction)
- **Kill if** guidance is HELD or RAISED alongside the notice
- **Kill if** the special loss is < ¥500M (immaterial vs. ¥46B market cap → ~1% hit)
- **Kill if** stock is already down >10% in the 30 days pre-filing (priced in)
- **Kill if** liquidity check (20-day ADV) < \$1M USD-equivalent — un-tradeable

Catalyst map

- **Primary catalyst:** FY2026 results release (typically April for a February-end FY) — watch for concurrent guidance revision
- **Window:** 0–30 days
- **Entry trigger:** deep-dive confirms loss > income AND guidance cut
- **Exit trigger:** post-results reversal, earnings-day gap up, or hit kill condition

Position sizing

Placeholder — do not size until deep-dive complete. Liquidity floor: 4343 20-day ADV must be confirmed. Target portfolio weight: 0.5–1.0% net short on conviction, half-size on $tc=0.88$ confidence.

Scoring Rubric — activist_governance

Dimension	Weight	Definition
Signal Strength	2.0	Quality and specificity of the filing or disclosure.
Information Asymmetry	2.0	How widely the signal is known to market.
Activist Track Record	1.5	Historical outcome rate for this party.
Risk Reward	1.5	Payoff skew under realistic outcomes.
Catalyst Clarity	1.0	Specific forcing events or deadlines.
Edge Decay	1.0	How quickly the edge compresses post-publication.
Liquidity	1.0	ADV vs. intended position size.
