Translation notes

Japanese source. Translation pattern is unambiguous at tc=0.92. Deep-dive must still read the PDF for specifics (price, premium, timing, counterparty).

Company context

- Market cap: \$30388M USD
- Sector / sub-sector: TODO (deep-dive)
- Recent price action: TODO (30/90d)
- Cross-listings: TODO (check HK / ADR / LSE)

Thesis statement (to be completed by deep-dive)

TOB / tender-offer target. Typical playbook: long target into spread; size to annualized IRR. If the filer (buyer side) is the ticker, re-check direction during deep-dive — trading companies (8001 Itochu) sometimes file as the *buyer*, in which case thesis is different.

Steelman of the opposite view

Pending deep-dive. Likely angles:

- Market already priced in the disclosure (no edge).
- Terms / magnitude less favorable than headline implies.
- Counter-catalyst exists (regulatory, activist, competing bid).
- Translation / interpretation error — revisit tc if direction flips on re-read.

Web research layer (mandatory — pending)

- Nikkei / Reuters / Bloomberg coverage of Aeon Co., Ltd.
- Peer precedents for the same signal_type in JP market
- Shareholder register (activist presence?)
- Analyst coverage & recent target price moves

Kill conditions

- **Kill 1:** Subsequent TDnet filing revising terms unfavorably — flip or cut.
- **Kill 2:** Board or independent committee opposes (for takeover signals); regulatory action escalates (for litigation signals).
- **Kill 3:** Translation re-read flips thesis direction → exit.
- **Kill 4:** Scanner flags superseding signal at the next cycle.

Catalyst map (skeleton)

Position sizing

Satellite (2–5%). Adjust for liquidity of 8267.T; \$30388M mcap implies institutional liquidity.
