Predictive Discovery Limited (PDI.XASX) — "PDI & Robex Merger Update"

> **STATUS: pending_deep_dive.** Automated-scanner stub. Do not act on this alone.

TL;DR

On 2026-04-15 (23:58 UTC) Predictive Discovery released an ASX announcement titled "PDI & Robex Merger Update" under the Takeover Announcements / Scheme Announcements category (documentKey 2924-03079443-6A1320718). Scanner classifies as `merger_agreement`, `signal_category takeover`, `strength=4`, `catalyst_clarity=5`, `thesis_direction=unknown` (pending PDF read). Score 28 puts this in the immediate-route bucket. PDI is a West-African gold developer (Guinea, Bankan project); Robex Resources is a TSX-V/TSX-listed gold producer operating in Mali and Guinea. A merger between the two would create a ~2-3 Moz gold platform in the Siguiri-Mandiana belt. Deep-dive must determine: (a) whether this is an announcement, reaffirmation, or material amendment to a previously-disclosed scheme of arrangement; (b) the implied exchange ratio and target premium; (c) the regulatory/shareholder timeline; (d) whether the deal is contingent on financing.

Source signal

- **Signal** — ASX announcement 2924-03079443-6A1320718 — 2026-04-15 23:58:29 UTC — ASX/markitdigital — headline "PDI & Robex Merger Update"; `isPriceSensitive=false` (operator should verify — takeover-scheme updates typically ARE price-sensitive; the false flag warrants PDF inspection); PDF 209KB; matches scanner pattern `\b(merger|merging)\b`.
- The markitdigital API does not expose the PDF URL; operator must pull the PDF directly from the ASX Market Announcements page at <https://www.asx.com.au/markets/company/PDI> once the deep-dive starts.

Translation notes

English source, `translation_confidence` = n/a. No interpretive risk on the scanner side.

Company context (to be completed by deep-dive)

- Market cap: \$1.78B USD (AUD ~\$2.7B at ~0.66 AUDUSD). Mid-cap gold developer.
- Sector: Materials (GICS) — gold exploration/development.
- Primary asset: Bankan Gold Project, Guinea (Siguiri basin). Last publicly disclosed resource base ≈ 5 Moz indicated+inferred (confirm from latest DFS/MRE announcements).
- Counterparty: Robex Resources Inc. — TSX/TSX-V listed; produces from Nampala mine (Mali) and has development-stage Kiniero project (Guinea). Market cap ≈ C\$500M (confirm).
- Listing: ASX primary; no ADR; no dual listing currently confirmed — merger could create a TSX-listed combined entity.
- Trading status: N (normal) at scan time — no trading halt flagged.
- 30/90-day price: TODO. Pull from yfinance PDI .AX close history.
- Recent news: TODO — check AFR, Mining Journal, Reuters for prior merger milestones in 2025-2026. Scheme of arrangement documents will likely be on the PDI investor-relations page.
- Holders: TODO. PDI typically has a mix of Australian retail, mining-specialist funds (Franklin Gold & Precious Metals, Van Eck Gold Miners, Sprott) and possibly strategic industry holders. Any register change around the scheme is itself a signal.

Thesis statement (to be completed by deep-dive)

Pending. Direction unknown until PDF is read.

Deep-dive must:

- Read the PDF to extract:

- Status of merger (binding scheme agreed / amended / conditions precedent / approval obtained / terms re-cut)
- Exchange ratio (PDI shares per Robex share, or vice versa) and implied PDI premium at the announcement spot
- Whether the deal is now recommended unanimously by both boards
- Break-fee / reverse break-fee quantum
- Regulatory clearances still outstanding (FIRB in Australia, Canadian Competition Bureau, Guinea Mining Ministry)
- Shareholder meeting date and court-sanction date
- Any capital raise or bridge financing attached to the merger
- Determine the arb spread:
 - Spot PDI vs. (exchange ratio × spot Robex) in a common currency
 - Annualized based on time-to-close
- Cross-check:
 - PDI's standalone DFS NPV and the implied consideration as % of NPV
 - Robex's latest 43-101 resource/reserve statement and production profile
 - Gold price backdrop — merger arbs in gold-miner deals are sensitive to absolute gold (breakup risk rises if gold rallies hard, stand-alone value rises)
- Decide on instrument:
 - **Long PDI + short Robex (or vice versa)** — classic merger-arb — if the deal is binding scheme with firm exchange ratio
 - **Outright long PDI** — if the update is an *improved* bid or increased ratio
 - **Outright short PDI** — if the update signals deal-break risk (condition not met, regulator pushback, financing gap)
 - **Do nothing** — if this is routine procedural update with no new economic information

Steelman of the opposite view

- **Update = no change:** "Merger Update" in ASX filings often just means a procedural tick (e.g. "court date confirmed" or "ineligible foreign shareholders process"). In that case scanner false-positive on the \bmerger\b pattern; no tradeable alpha.
- **Deal break priced in:** If PDI has been trading at a wide discount to Robex-implied consideration for weeks, the market has already signaled break risk and the "update" may just confirm it — no edge from entering after confirmation.
- **Gold tape driven:** Gold equities move in a 0.6+ beta to spot gold. Short-term P&L on the arb may be dominated by gold moves unless both legs are hedged — true arb spread may be much smaller than nominal PDI/Robex price moves imply.
- **Merger creates forced-seller flow:** Some Australian index-linked holders must sell on conversion to a TSX-primary listed entity (if that's the structure). Post-completion drift could be negative on PDI equivalent — so "long PDI into close" is not automatically right.
- **Guinea country risk:** Guinea imposed mining-code reforms and state-participation demands in 2022-2024. Any adverse ministry commentary during this merger window caps upside even if the deal closes.

Web research layer (mandatory — pending)

- Original scheme-implementation agreement date and terms (PDI ASX releases H2 2025 / Q1 2026)
- Robex Resources SEDAR+ filings (management information circular for the Robex shareholder meeting)

- Independent Expert's Report (IER) on the PDI scheme — ASX release if prepared
- Mining Journal, Reuters, Bloomberg coverage of the 2026-04-15 update
- ASIC / ASX Corporate Governance approvals
- Canadian securities approvals (Quebec AMF if Robex is Quebec-domiciled)
- FIRB approval status (Australia) for any Guinean/Malian asset change of control
- Guinean Ministry of Mines public statements for 2025-2026 on Bankan / Kiniero
- Gold price: spot + 3-month forward, COMEX skew
- Options: PDI ASX options liquidity (typically thin for mid-cap miners)

Kill conditions

- **Kill 1:** PDF reveals this is a pure procedural update (e.g. second-court-date confirmation) with no change to economic terms — no alpha; archive.
- **Kill 2:** Exchange ratio unchanged AND arb spread < 3% annualized — reward doesn't clear execution friction for a cross-listed AUD/CAD arb.
- **Kill 3:** Regulatory knockback (Guinea state participation demand, FIRB block) that materially changes the deal — outright long PDI thesis dead; reconsider as short.
- **Kill 4:** Gold spot falls >8% within 2 weeks of entry — gold-equity arb trades are swamped by underlying; unwind and re-enter in a calmer tape.
- **Kill 5:** Robex board withdraws recommendation. Merger-arb P&L flips to deal-break loss; cover immediately.
- **Kill 6:** Signal_type on re-scan reclassifies to merger_termination (already in the PDI-historical log as a null) — deal dead; close any long-PDI arb leg.

Catalyst map

Event	Date/Window	Entry trigger	Exit trigger
"Merger Update" announcement	2026-04-15 (done)	—	—
Price reaction next ASX session	2026-04-16 AEST	PDI flat/down on positive update → add long	Up-gap >5% → trim
Independent Expert's Report (if pending)	TODO from scheme booklet	Fair & reasonable → confirm arb	Not fair → abort
Shareholder meeting (both sides)	TODO	Approval threshold met → collapse spread	Fail → short
Court sanction (Australian Federal Court)	TODO	Sanctioned → implementation	Not sanctioned → exit
Implementation / record date	TODO	—	Close arb at record
Regulatory long-stop date	TODO	—	Long-stop breach → deal terminates

Position sizing

Satellite (1–3%) if entering as a classic merger-arb. PDI ADV is modest (~\$5-10M AUD/day) and Robex ADV on TSX is thinner; both legs need careful VWAP execution. Cross-currency (AUD/CAD) adds a small FX overlay — either hedge via AUDCAD forward or accept the residual. Options expression is impractical — both sides too illiquid.

Source traceability

- ASX announcement 2924-03079443-6A1320718 retrieved 2026-04-16 via `tools/asx_scanner.py` from `asx.api.markitdigital.com/asx-research/1.0/companies/PDI/announcements`
- OpenFIGI: ticker=PDI mic=XASX → figi=BBG0017X3YN4, issuer_figi=BBG0017X3YM5 (cached 2026-04-16)
- Market cap: \$1.78B USD — from `working/asx_universe.json` (as_of 2026-04-14T16:08:27Z; yfinance PDI.AX Ticker.info × AUDUSD)
- Scanner pattern matched: `\b(merger|merging)\b` (in ASX_TITLE_RULES → signal_type=merger_agreement)
- ASX headline: "PDI & Robex Merger Update"
- Announcement type (ASX): "Takeover Announcements/Scheme Announcements"
- Announcement flagged isPriceSensitive=false — VERIFY; scheme updates should normally be flagged true
- File: 209 KB PDF (not fetched — URL not exposed by markitdigital API; operator must pull from ASX Market Announcements page at time of deep-dive)
- Scan date: 2026-04-16; signal_id 0439e1303980b984c488d19b31a5229a; score 28.0 (routed immediate)

Scoring Rubric — merger_arb

Dimension	Weight	Definition
Spread Size	3.0	Closing spread vs. expected terms.
Deal Certainty	2.5	Approval path, regulatory load, financing.
Annualized Return	2.0	Return annualized on expected close.
Break Risk	1.5	Probability and severity of deal failure.
Liquidity	1.0	ADV vs. intended position size.
